U.S. Critical Minerals Delegation and Projects Update

U.S. Critical Minerals Delegation

International Graphite Limited (ASX: IG6) (FWB: H99) (International Graphite) will attend a U.S. Critical Minerals Delegation coordinated by Australia Trade and Invest for the Australian Government in Washington D.C, commencing on September 15, 2025.

The Company is seeking to establish a leading position in the Western graphite supply chain from raw material supply through to battery anode materials including micronised, purified and expandable intermediate products.

The US currently import most of their graphite needs with limited prospects for developing domestic natural graphite.

The U.S. government recognises the strategic importance of graphite and critical minerals to the U.S. defence industrial base, and economic and national security - reflected in Award Basket Consideration issued by the U.S. Department of Defense for US\$7.5 million in award funding for the Springdale 'mine to market' business plan.

The delegation will include meetings with leads from key U.S. government agencies, including offices within the Department of Defense, Department of Commerce, and Export-Import Bank of the United States.

International Graphite is developing a network of integrated downstream processing operations that includes facilities at Collie, in Western Australia, and at Bitterfeld, in Germany and is assessing the opportunity to develop industrial and anode facilities in Savannah, Georgia on a similar scale, scope and metrics of those previously scoped for the proposed Collie Battery Anode Materials Facility².

These facilities would ultimately facilitate the integration of graphite concentrate production from the Company's 100% owned Springdale mine in Western Australia to markets.

The weeks schedule will conclude with Investor meetings in New York.

Projects Update

In Collie, construction activities for the new commercial micronising facility are progressing including land access negotiations, plant and facility design, development approvals and utility infrastructure works.

In Germany, development of the expandable graphite project has commenced with joint venture partners Arctic Graphite AS completing site assessments at the Bitterfeld Chemipark. Planning for metallurgical testwork and engineering and design is also underway supported by the technical expertise of partners Hensen Carbon and Graphite and ProGraphite GMBH.

¹ All amounts are expressed in Australian dollars unless otherwise stated.

² Refer ASX release dated 26 April 2024

The Company is working to have both graphite facilities operating by 2027. Together, they would be capable of producing approximately 10,000 tonnes of high value graphite products and generating revenues of US\$20-30 million³ per annum.

Opportunities to expand production capability to add purification and expandable graphite processes at Collie, and micronising and purification in Germany, are being examined.

This announcement has been authorised for release by the Board of International Graphite Limited.
